

IN THE CLAIMS

1. (Previously Presented) A semiconductor device comprising:
a Si crystal having a (111) surface; and
an insulation film formed on said (111) surface of said Si crystal,
wherein at least a part of said insulation film comprises a Si oxide film containing Kr,
said Si oxide film being substantially free from crystal defects.
2. (Original) A semiconductor device as claimed in claim 1,
wherein said Si oxide film has a surface state density of $10^{11} \text{eV}^{-2} \text{cm}^{-2}$ or less.
3. (Previously Presented) A semiconductor device comprising:
a Si crystal having a (111) surface; and
an insulation film formed on said (111) surface of said Si crystal,
wherein at least a part of said insulation film comprises a Si oxide film containing Kr,
and a Kr concentration level decreases in said Si oxide film from a surface of said Si oxide
film to an interface between said Si oxide film and said Si crystal.
4. (Previously Presented) A semiconductor device as claimed in claim 1,
wherein said Si oxide film contains Kr with a surface density of $5 \times 10^{11} \text{cm}^{-2}$ or less at
a surface thereof.
5. (Original) A semiconductor device as claimed in claim 1, further having a gate
electrode on said Si oxide film.
6. (Original) A semiconductor device as claimed in claim 1,
wherein said crystal surface is formed on a part of a device isolation groove formed
on a Si substrate.
7. (Previously Presented) A Semiconductor device as claimed in claim 1,
wherein said crystal surface forms a principal surface of said Si crystal.

Response

8. (Original) A semiconductor device as claimed in claim 1, wherein said crystal surface is formed on a surface of a polysilicon film.
9. (Withdrawn) A semiconductor device characterized by:
a Si crystal having a crystal surface near a (111) surface; and
an insulation film formed on said crystal surface,
at least a part of said insulation film comprising a silicon nitride film containing Ar or Kr.
10. (Withdrawn) A semiconductor device as claimed in claim 9, wherein said Si nitride film contains Ar or Kr with a surface density of $5 \times 10^{11} \text{ cm}^{-2}$ or less.
11. (Withdrawn) A semiconductor device as claimed in claim 9, wherein said Si nitride film contains hydrogen atoms therein.
12. (Withdrawn) A semiconductor device as claimed in claim 9, further comprising a gate electrode on said Si nitride film.
13. (Withdrawn) A semiconductor device as claimed in claim 9, wherein said (111) is formed on a part of a device isolation groove formed on a Si substrate.
14. (Withdrawn) A semiconductor device as claimed in claim 9, wherein said (111) surface formed a principal surface of a Si substrate.
15. (Withdrawn) A semiconductor device as claimed in claim 9, wherein said (111) surface is formed on a surface of a polysilicon film.
16. (Withdrawn) A semiconductor device, comprising:
a Si substrate;
a device isolation groove formed on said Si substrate; and
an insulation film covering a surface of said Si substrate and a sidewall surface of said device isolation groove continuously;
said insulation film comprising a Si oxide film having a uniform thickness.

Response

17. (Withdrawn) A semiconductor device as claimed in claim 16, wherein said Si oxide film contains Kr on a surface thereof with a surface density of $5 \times 10^{11} \text{ cm}^{-2}$ or less.
18. (Withdrawn) A semiconductor device as claimed in claim 16, wherein a Kr concentration level decreases in said Si oxide film from a surface thereof to an interface to said Si substrate.
19. (Withdrawn) A semiconductor device as claimed in claim 16, wherein said Si oxide film has a thickness of about 2.1 nm or less.
20. (Withdrawn) A semiconductor device, comprising:
 - a Si substrate;
 - a device isolation groove; and
 - an insulation film covering a surface of said Si substrate and a sidewall surface of said device isolation groove continuously,
 - said insulation film comprising a Si nitride film containing Ar or Kr.
21. (Withdrawn) A semiconductor device as claimed in claim 20, wherein said Si oxide film contains Ar or Kr on a surface thereof with a surface density of $5 \times 10^{11} \text{ cm}^{-2}$ or less.
22. (Withdrawn) A semiconductor device as claimed in claim 20, wherein said Si nitride film has a thickness of about 2.1 nm or less.
23. (Withdrawn) A polysilicon transistor, characterized by:
 - an insulation film;
 - a polysilicon film formed on said insulation film;
 - a gate insulation film formed on said polysilicon film; and
 - a gate electrode formed on said gate insulation film,
 - said gate insulation film comprising a Si oxide film containing Kr.
24. (Withdrawn) A polysilicon transistor, characterized by:
 - an insulation film;
 - a polysilicon film formed on said insulation film;

Response

a gate insulation film formed on said polysilicon film; and
a gate electrode formed on said gate insulation film, said gate insulation film comprising a Si nitride film containing Ar or Kr.

25. (Withdrawn) A flash memory device, comprising:

a Si substrate;
a first insulation film formed on said Si substrate;
a floating gate electrode of polysilicon formed on said first insulation film;
a second insulation film formed on said floating gate electrode; and
a control gate electrode formed on said second insulation film,
said second insulation film comprising a Si oxide film containing Kr.

26. (Withdrawn) A flash memory device, comprising:

a Si substrate;
a first insulation film formed on said Si substrate;
a floating gate electrode of polysilicon formed on said first insulation film;
a second insulation film formed on said floating gate electrode; and
a control gate electrode formed on said second insulation film,
said second insulation film comprising a Si nitride film containing Kr.

27. (Withdrawn) A ferroelectric memory device, comprising:

a Si substrate;
a gate insulation film formed on said Si substrate;
a gate electrode of polysilicon formed on said gate insulation film;
a Si nitride film formed on said gate insulation film; and
a ferroelectric film formed on said Si nitride film; and
another electrode formed on said ferroelectric film, said Si nitride film containing Ar
or Kr.

28. (Withdrawn) A semiconductor integrated circuit device, comprising:

at least one metal layer;
a Si layer formed above said metal layer with an insulation film interposed
therebetween, said Si layer having a (111) principal surface; and

Response

a plurality of transistors formed on said Si layer,
at least a part of said insulation film formed on a surface of said silicon layer
comprising a Si oxide film containing Ar.

29. (Withdrawn) A semiconductor integrated circuit, comprising:
at least one metal layer;
a Si layer formed above said metal layer with an insulation film interposed
therebetween, said Si layer having a (111) principal surface; and a plurality of transistors
formed on said Si layer,
at least a part of said insulation film formed on a surface of said silicon layer
comprising a silicon nitride film containing Ar or Kr.

30. (Withdrawn) A method of forming a Si oxide film comprising the steps of:
forming a plasma by introducing an inert gas predominantly of Kr and an oxygen gas
into a processing chamber and causing excitation therein by a microwave; and
oxidizing a crystal surface of a Si crystal in the vicinity of a (111) surface by atomic
state oxygen O* formed with excitation of said plasma.

31. (Withdrawn) A method of forming a Si oxide film as claimed in claim 30, wherein
said oxidation step is conducted at a temperature of 550°C or less.

32. (Withdrawn) A method of forming a Si oxide film as claimed in claim 30, wherein
said oxidation step is conducted at a temperature of about 400°C.

33. (Withdrawn) A method of forming an oxide film on a polysilicon pattern,
characterized by the steps of:
forming plasma by introducing an inert gas predominantly of Ar or Kr and a gas
containing nitrogen as a constituent element into a processing chamber and causing a
excitation therein by a microwave; and
nitriding a crystal surface of a Si crystal in the vicinity of (111) surface by hydrogen
nitride radicals NH* formed with excitation of said plasma.

Response

34. (Withdrawn) A method of forming a Si nitride film as claimed in claim 33, wherein said nitriding step is conducted at a temperature of 550°C or less.

35. (Withdrawn) A method of forming a Si nitride film as claimed in claim 33, wherein said nitriding step is conducted at a temperature of about 400°C.

36. (Withdrawn) A method of forming a device isolation structure, comprising the steps of:

forming a device isolation groove defined by a sidewall surface on a surface of a Si substrate;

depositing an oxide film on said surface of said Si substrate so as to fill said device isolation groove;

exposing said surface of said Si substrate and a top part of said sidewall surface of said device isolation groove;

oxidizing said exposed surface of said Si substrate and said top part of said device isolation groove including a corner part at a top edge of said sidewall surface of said device isolation groove, to form another oxide film such that said another oxide film covers said surface of said Si substrate and said exposed part of said sidewall surface of said device isolation groove continuously,

said another oxide film being formed by the steps of:

forming plasma by exciting an inert gas predominantly of Kr and an oxygen gas by a microwave; and

oxidizing said surface of said Si substrate and said exposed part of said sidewall surface of said device isolation groove by atomic state oxygen O* formed with excitation of said plasma.

37. (Withdrawn) A method of forming an oxide film on a polysilicon pattern, characterized by the steps of:

forming a polysilicon pattern on an insulation film; and

oxidizing a surface and a sidewall of said polysilicon pattern to form an oxide film such that said oxide film covers said surface and said sidewall of said polysilicon pattern continuously,

said step of forming said oxide film comprising the steps of:

Response

forming plasma by exciting an inert gas predominantly of Kr and an oxygen gas by a microwave; and

oxidizing a surface of said polysilicon pattern by atomic state oxygen O* formed with excitation of said plasma.

38. (Withdrawn) A method of forming a nitride film on a polysilicon pattern, characterized by the steps of:

forming a polysilicon pattern on an insulation film; and

forming a nitride film by nitriding a surface and sidewall of said polysilicon pattern such that said nitride film covers said surface and said sidewall of said polysilicon pattern continuously;

said step of forming said nitride film comprising the steps of:

forming plasma by exciting an inert gas predominantly of Ar or Kr and a gas containing nitrogen as a constituent element by a microwave; and

nitriding a surface of said polysilicon pattern by hydrogen nitride radicals NH* formed with excitation of said plasma.

39. (Withdrawn) A method of forming a ferroelectric film, comprising the steps of depositing a ferroelectric film on a substrate; and crystallizing said ferroelectric film,

said step of crystallizing said ferroelectric film comprising the steps of:

forming plasma by exciting an inert gas predominantly of Kr and an oxygen gas by a microwave; and

exposing said ferroelectric film to atomic state oxygen O* formed with excitation of said plasma.

40. (Previously Presented) A semiconductor device comprising:

a Si crystal having a (111) surface; and

an insulation film formed on said (111) surface of said Si crystal,

wherein at least a part of said insulation film comprises a Si oxide film containing Kr, wherein said Kr reduces current leakage and improves breakdown characteristics of said insulation film when formed on said (111) surface of said Si crystal.

Response

41. (Previously Presented) A semiconductor device as claimed in claim 40, wherein said Si oxide film has a surface state density of $10^{11} \text{eV}^{-2} \text{cm}^{-2}$ or less.
42. (Previously Presented) A semiconductor device as claimed in claim 40, wherein a Kr concentration level decreases in said Si oxide film from a surface of said Si oxide film to an interface between said Si oxide film and said Si crystal.
43. (Previously Presented) A semiconductor device as claimed in claim 40, wherein said Si oxide film contains Kr with a surface density of $5 \times 10^{11} \text{cm}^{-2}$ or less at a surface thereof.
44. (Previously Presented) A semiconductor device as claimed in claim 40, further comprising a gate electrode on said Si oxide film.
45. (Previously Presented) A semiconductor device as claimed in claim 40, wherein said (111) surface of said Si crystal is formed on a part of a device isolation groove formed on said Si crystal.
46. (Previously Presented) A semiconductor device as claimed in claim 40, wherein said (111) surface of said Si crystal forms a principal surface of said Si crystal.
47. (Previously Presented) A semiconductor device as claimed in claim 40, wherein said (111) surface of said Si crystal is formed on a surface of a polysilicon film.
